

MINI

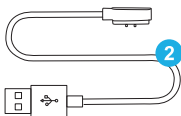

Anti Barking Collar

Please read this manual
carefully before using the
Bark Collar

COMPONENTS

1 Bark Collar with Adjustable Strap

2 Magnetic Charging Cable

3 User Manual

PRODUCT OVERVIEW

Sensitivity display

Battery charge level display

Vibration Mode

Beeping Mode

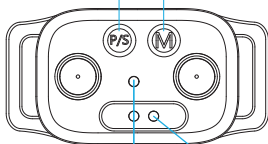

Vibration+Beeping Mode

Charging Error Indicator

P/S Button 1 2 M Button

Sensor Microphone 4

3 Charging Port

1. ON/OFF button (long press), Sensitivity button (short press)
2. Mode button (beep, vibration, beep+vibration)
3. Magnetic Charging Port
4. Sensor Microphone

IMPORTANT SAFETY INFORMATION

- **Not for use on aggressive dogs.**
- **For dogs older than 6 months only.**
- **Keep out of reach of children! For dog use only.**
- **Limit Bark Collar use to 12 hours per day** to ensure your dog's comfort.
- **Reposition the Bark Collar every 1-2 hours** whenever possible to prevent irritation.
- **Ensure a proper fit** of the nylon collar by checking for excessive pressure; see this manual for guidance on achieving an ideal fit.
- **Do not attach a leash** directly to the Bark Collar; this can create too much pressure on the contact points.
- **Clean the collar prongs and your dog's neck weekly** with a damp cloth to maintain hygiene and comfort.

QUICK START GUIDE FOR TRAINING

To begin training with the Mini Anti-Bark Collar, follow these simple steps:

- 1. Charge the collar** using the magnetic charging cable and a 5V adapter for **1.5–2 hours**. The battery is full when all four bars are solid.
- 2. Turn on the collar** by pressing and holding the Power/Sensitivity (**P/S**) button for **3 seconds** until it vibrates and the lights turn on. To turn it off, press and hold the **P/S** button again for 3 seconds.
- 3. Select a training mode** by briefly pressing the **M button**. Choose between: Beep, Vibration, or Beep + Vibration.
- 4. Set the sensitivity level** (0–5) by pressing the **P/S** button.

The recommended starting point is **Level 4**.

- Use levels 4–5 in quiet places.
- Use levels 1–3 in noisy places.
- Level 0 is Test Mode (for checking, not training).

5. Adjust the strap.

Use the **plastic strap holders** to resize the collar - it can be adjusted from **very small to large** to fit different breeds. Make sure the collar sits snugly but not tight: leave space for **two fingers** between the strap and your dog's neck. Trim any excess strap and lightly seal the edge with a flame to prevent fraying.

6. Put the collar on your dog.

Place the unit at the front of your dog's neck, with the microphone sensor positioned on the throat for accurate bark detection.

CHARGING INSTRUCTIONS

Before first use, charge the Bark Collar with a PC, power bank, or charger that has a 5V output for 2-3 hours.

POWER INDICATOR GUIDE:

Flashing from left to right: The Bark Collar is charging.

All 4 battery bars are solid: The Bark Collar is fully charged.

Left battery bar flashing rapidly: The battery is low.

Flashing red rapidly with a beeping sound: There is an issue with the charging process.

IMPORTANT NOTES:

1. Only use a power source rated at 5V.
2. Use the included charging cable for optimal performance. Other cables may not be compatible and could damage the Bark Collar.
3. **A charger, power bank, and other charging devices** are not included in the package.

OPERATION INSTRUCTIONS

1) Turning the Bark Collar On/Off

To turn the Bark Collar **on**, press and hold the Power / Sensitivity (P/S) button for 2 seconds until you feel a vibration.

To turn the Bark Collar **off**, press and hold the button (P/S) for 3 seconds, which will be confirmed by a beeping tone.

OPERATION INSTRUCTIONS

2) Mode Settings

Short press the Mode Button **(M)** to switch between:

Beeping Mode

Vibration Mode with Smart Technology

Vibration+Beeping Mode with Smart Technology

3) Adjusting Sensitivity Level

Short press the "P/S" button to adjust sensitivity levels from 0 to 5. Level 5 is the most sensitive, and Level 1 is the least. **Level 0** is the test mode.

Note:

Sensitivity helps prevent false activations. Start at Level 3 and observe the collar's response:

- **Increase the sensitivity** by one level if it does not respond to barking.
- **Decrease the sensitivity** by one level if it activates without the dog barking.

Remember that both the sensitivity and the snugness of the collar on your dog's neck affect its response to barking. For proper instructions, refer to the relevant section in this manual.

TESTING THE BARK COLLAR

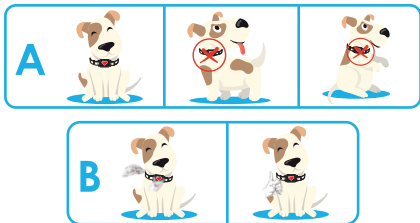

To test, set the sensitivity to **Level 0** by pressing the P/S button. **Level 0 is the test mode** and allows you to check functionality easily.

Then, simulate a dog's bark toward the Sensor Mic at the back of the Bark Collar; it should emit a beep followed by vibration. **After the test activates, the Bark Collar will automatically return to its standard operating mode.** The test mode is designed to confirm that the collar is functional, with both sound and vibration.

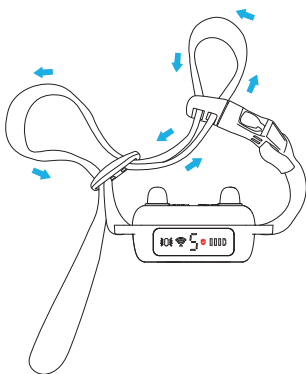

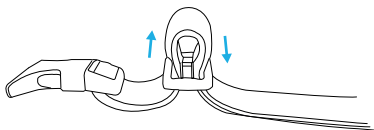

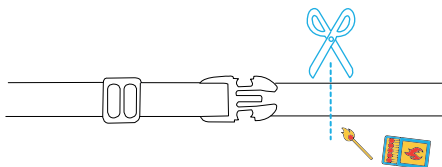

HOW TO ADJUST THE BELT

Collar sits snugly against your dog's neck, but leave enough room for a finger to slide between the strap and your dog's neck. For best results, center the collar on your dog's throat.

TRIMMING THE COLLAR:

- a) Use a pen to mark the desired length, considering possible growth if your dog is young or has a thick seasonal coat.
- b) Remove the collar and carefully cut off any excess material.
- c) Before refitting, seal the cut edge by quickly passing a flame along the trimmed edge to prevent fraying.

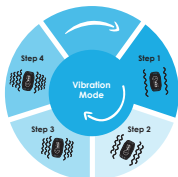

HOW THIS BARK COLLAR WORKS

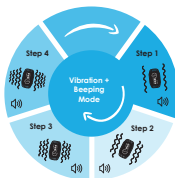

1) Beeping Mode. The Bark Collar will emit a beeping tone each time it detects your dog barking.

2) Vibration Mode with Smart Technology. In Vibration Mode, the Bark Collar uses gentle vibrations that automatically increase in intensity if your dog keeps barking. Thanks to smart technology, the collar adjusts to deliver a stronger response when barking continues, reaching the maximum level if necessary. If your dog remains quiet for a minute, the collar resets to its initial, softer level. This smart, step-by-step approach helps control excessive barking in a safe and effective way, ensuring your dog's comfort while encouraging better behavior.

Vibration Mode

Vibration+Beeping Mode

Vibration: Intensity automatically increases with each step.

Beeping Tone: Remains at a consistent volume.

3) Beeping + Vibration Mode with Smart Technology.

In this mode, the Bark Collar uses a combination of sound and vibration that gradually intensifies if your dog continues barking. Thanks to smart technology, the collar automatically adjusts the response level, reaching its maximum if the barking persists. If your dog stops barking for a minute, the collar resets to the initial level, starting with a gentler response. This smart approach helps discourage excessive barking in a humane way, making it easy for you and comfortable for your dog.

FREQUENTLY ASKED QUESTIONS

Q: Why doesn't the Bark Collar activate when my dog barks?

A: First, check that the Bark Collar is securely fitted, allowing enough room for one finger between the strap and your dog's neck. Some dogs may bark softly, in which case you might need to increase the sensitivity level. If your dog has a thick coat, it can sometimes limit detection; in such cases, trim the fur closely to where the collar sits.

Q: Why does the Bark Collar activate in noisy environments, even when my dog isn't barking?

A: Although the collar's bark detection is optimized, certain noises may share a similar frequency to barking, which can occasionally trigger the collar. If this happens frequently, try lowering the sensitivity level, of the collar.

FREQUENTLY ASKED QUESTIONS

Q: Can I use the Bark Collar when other dogs are playing nearby?

A: Dogs often bark while playing or when excited. For your dog's comfort and safety, we do not recommend using the Bark Collar in playful or high-activity settings.

Q: How can I tell if this Bark Collar is suitable for my dog?

A: The Bark Collar is designed for healthy dogs over six months old. It should not be used on unhealthy or aggressive dogs. If you're unsure about using this collar with your dog, consult your veterinarian or a certified trainer.

Q: Can I use any type of charger with this Bark Collar?

A: No, it's recommended to use a charger with a 5V output only. Chargers with a higher output can damage the collar. If the voltage is too high, the collar will stop charging and emit a warning tone.

Q: Will my dog stop barking completely with this collar?

A: The Bark Collar is designed to effectively and humanely reduce excessive barking. It should be used when you want to discourage unnecessary barking.

FREQUENTLY ASKED QUESTIONS

Q: Is this Bark Collar safe and humane for my dog?

A: Yes, this Bark Collar is designed to gently capture your dog's attention without causing harm. The initial vibration or beep may startle your dog, but it's intended to be a safe and humane approach.
